

VIRTRU FOR MICROSOFT OUTLOOK

Strengthen Outlook Email Data Security

Virtru for Microsoft Outlook empowers organizations to enhance email security, offering data-centric protection without disrupting productivity. By leveraging Attribute-Based Access Controls (ABAC) and optional encryption, Virtru enforces precise data governance, ensuring that email messages and attachments are secure and compliant with organizational policies. Virtru ensures your sensitive information remains protected both within and beyond your organization, giving you the confidence to collaborate securely.

On-Premises: The Most Comprehensive Set of Data-Centric Security Capabilities

Enhanced Governance

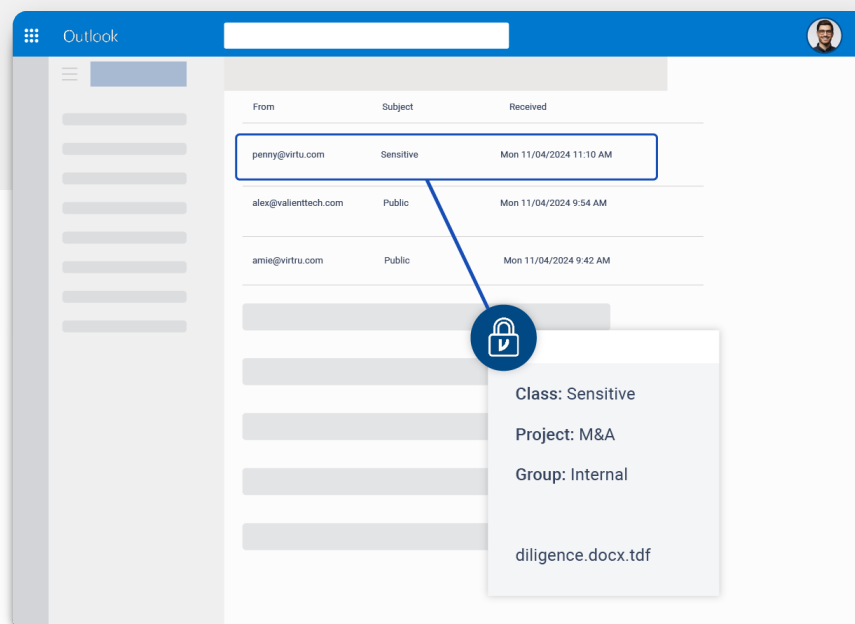

- Enforce access decisions by leveraging Attribute-Based Access Controls, ensuring that email delivery is aligned with recipient entitlements.
- Utilize data tags to dynamically inform and enforce security policies based on content and recipient attributes.

Adaptive Protection

- Protect email messages and attachments with optional encryption to ensure data confidentiality.
- Seamlessly integrates with leading identity and access management (IAM) providers, allowing you to leverage existing infrastructure.

Complete Control

- Host and manage Virtru on-premises or in your own virtual private cloud, giving you the most comprehensive set of data-centric security capabilities available.
- Retain complete visibility and governance over your email security, ensuring that all data remains within your control.

Seamless Integration and Usability

Virtru for Microsoft Outlook is designed to integrate data-centric security without disrupting your team's workflow. By applying Zero Trust security measures, Virtru secures access and collaboration, ensuring protection while maintaining a smooth user experience. Persistent email protection enforces security policies on emails and attachments wherever they are shared, giving you continuous control over your data.

Additionally, Virtru for Microsoft Outlook ensures a consistent user experience by seamlessly integrating into Microsoft Outlook, eliminating the need for new training. This approach not only safeguards your data but also keeps your team productive and focused.

Zero Trust Security Model

- Strengthen email protection with Attribute-Based Access Controls
- Safeguard sensitive communications without slowing down workflows
- Reduce risk of unauthorized access to sensitive data

Persistent Email Protection

- Ensure your emails and attachments stay secure, even after sharing or forwarding
- Maintain continuous control over data, reducing the risk of data breaches
- Support compliance by enforcing security policies wherever data is shared

Consistent User Experience

- Boost productivity with integration into Outlook's familiar environment
- Eliminate the need for training, allowing teams to stay focused on their work
- Simplify security with easy to use controls, making data protection effortless
